

Do you need a Cardiac MRI, CT or Echocardiogram?

Researchers at The Ohio State University Medical Center are now conducting several studies that perform cardiac imaging. These studies will examine different physical areas of the heart, arteries and veins and will look at the heart before and after procedures.

To participate in this study you must be:

- 18 years or older
- Able to lay still for the testing to be performed (up to two hours)
- Able to have an MRI, echocardiogram or cardiac CT

There are currently several different studies focused on noninvasive imaging. Participating in an imaging study may result in some of your research-related treatment being paid for by the study sponsor. You may be compensated for your time while participating.
