

Do you have Pulmonary Hypertension (PAH)?

Researchers at Ohio State's Richard M. Ross Heart Hospital are conducting several clinical research studies to determine if investigational treatment options for PAH are as safe and effective as current treatments. Our studies examine different aspects of PAH treatment and include a wide range of treatments from drug therapy to genetics studies.

You may be eligible to participate in one of these studies if you:

- Are 18 years or older
- Have PAH
- Are seeking treatment

There are currently several different studies focusing on treatment of PAH. Participating in a PAH study may result in some of your research-related treatment being paid for by the study sponsor. You may be compensated for your time while participating. These studies last for different amounts of time, ranging from one year to five years.
